

Map 4 Arabia-Azania

Compiled by D.T. Potts, 1996

Introduction

Despite the relative inaccessibility of southern Arabia to all but the most intrepid travelers in the pre-modern era, its historical geography has been studied intensively for over a century. Two giants of German scholarship have dominated this field, A. Sprenger in the nineteenth century, and H. von Wissmann in the twentieth. To be sure, other scholars have made significant contributions, but these two stand alone with respect to the intensity of their investigations into the southern Arabian toponyms preserved in the works of Strabo, Pliny and Ptolemy.

Because of unsettled political conditions, travel in Yemen has often been dangerous, and more than one nineteenth-century explorer lost his life there. The hostility of the area has meant that the modern Arabic toponymy of southern Arabia has been only imperfectly known. Even so, through various sources such as Admiralty charts and E. Glaser's unpublished notebooks, Sprenger and von Wissmann were able to posit numerous identifications without necessarily being able to verify them on the ground. In many cases it has been difficult to decide whether to accept such identifications or not, but I have attempted to separate the more tenuous proposals from those for which there seems to be sound justification.

It should be understood that many of the probable locations marked have not been verified epigraphically. In recent years, however, several scholars, including von Wissmann (1968; 1976; 1977), Beeston (1979; 1995), al-Sheiba (1987), Robin (1995) and Sa'id (1995), have identified many southern Arabian toponyms mentioned in classical sources with those known in the thousands of southern Arabian inscriptions discovered in Yemen. Robin (1997) arrived too late to take into account for the present map, but it is an important resource for anyone interested in the Semitic names of South Arabian towns mentioned in epigraphic sources. Even so, few further identifications with Greek and Latin toponyms or ethnonyms can be offered. Eventually, progress in this field may be expected to determine the identification of many more of the toponyms listed here as unlocated.

In southern Arabia, it is notoriously difficult to establish the periods in which a given toponym was known to the Greek and Roman world. Most first-hand knowledge of the region was undoubtedly acquired during the Roman era, but von Wissmann has interpreted certain collections of toponyms in Roman sources as reflecting much earlier conditions. Thus the names mentioned in Pliny (*NH* 6.154-60; 12.52-54) are taken to reflect the Sabaeen state in the late fifth century B.C. (von Wissmann 1977, Abb. 5), while other names—because of identifications with toponyms attested in southern Arabian inscriptions—are considered to reflect conditions in the kingdom of Qataban between the fourth and second centuries B.C. (von Wissmann 1976, Abb. 17). These proposals are reflected in the periodization of the toponyms, with question marks added for caution. A similar difficulty arises with toponyms excerpted by Stephanus of Byzantium from the first-century B.C. (?) *Arabika* of Ouranios (RE Suppl. 11 Zabida, col. 1316); these were not necessarily still current in Late Antiquity. Within the scope of the present work, however, it has not been possible to investigate in detail the history of each such toponym. Finally, the collection of toponyms preserved by Geograv (Schnetz 1920; 1951) has been taken into account, since it represents the last of the Late Antique sources for southern Arabia.

In the case of the east African toponyms mentioned by PME, Ptolemy and Cosmas Indicopleustes, the investigation of modern toponymy with a view to positing locations has been less intense than in the case of southern Arabia (but note Chitick 1976). The lower Red Sea and the Horn of Africa have been the scene of bitter military struggles recently, in Eritrea and Somalia especially, so that knowledge of their archaeology and ancient toponymy have perforce suffered because of their inaccessibility. Most investigation has been "armchair" research, with experts on PME such as Schoff (1912), Huntingford (1980), Casson (1989) and Groom (1995) proposing identifications on the basis of distances and the suitability of various harbors and inlets as shown on modern maps. Almost inevitably, these scholars have little, if any, first-hand experience of the coasts in question; this is all the

more unfortunate in view of the notable discrepancies between distances in PME and suitable sites for toponyms mentioned there.

Directory

Note: For commentary on PME references, see Casson 1989.
