### Tomographie de la résistivité électrique

Profil ERT 1

Profil ERT 4

Résultats de deux profils de tomographie de la résistivité électrique. Le quai est particulièrement visible jusqu'à approximativement 5 m sous le niveau actuel de la mer.

Résultats de la prospection par géoradar (fréquence de 400 mHz) à une profondeur de 55 à 75 cm sous le sol actuel. L'extension du quai orienté W/E et particulièrement visible. Les flèches rouges indiquent la localisation et l'orientation des profils de tomographie électrique réalisés. (Fond de carte Google Earth)

Entre Mares

The presentation content is divided into several sections:

- Top Left:** A plan view of a diamond-shaped structure with four sections labeled 'Pared C', 'Pared B', 'Pared A', and 'Pared D'. A scale bar is located below the plan.
- Top Right:** Four vertical cross-sections of the structure's walls, showing internal details and varying wall thicknesses.
- Middle Right:** An aerial photograph of the site, showing a central rectangular structure within a larger diamond-shaped enclosure, surrounded by green grass and trees.
- Bottom Left:** A ground-level photograph of a large, rectangular stone wall with a central opening, situated in an open field with a town in the background.
- Bottom Right:** A geophysical survey map of the diamond-shaped structure, color-coded by intensity. A legend to the right lists 'Barricada de la muralla' and 'Muralla' with corresponding symbols. A scale bar and north arrow are also present.
